The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as anticipated by Lim et al. (US 5,635,937). Lim discloses a pipelined analog-to-digital circuit. The Lim et al circuit includes a correction value output circuit (RAM 53) that stores preset correction values and a correction circuit (40, 60) that corrects the digital signal by way of operation based on the correction value output from the correction value circuit.

Claims 2-20 are allowed over the prior art of record because they do not show the selection (presetting) of the correction value for digital value from a subsequent stage (claims 2-7). The art of record also does not show the recited switch arrangements to input the reference voltage equivalents.

Applicant's arguments filed 30 July 2004 have been fully considered but are not persuasive. The point of the remarks seems more directed towards the fact that the applicant did not plagiarize the Lim description when writing their own application rather than raising a reasonable argument. The specific words of the claim 1 do not appear in Lim such that one could point to column and line of Lim and state here is the exact phrase. However, the examiner does not believe that such a position accurately reflects the state of the law concerning 35 USC 102.

Lim does disclose an A/D converter and correction circuitry that responds to the ADC output to furnish a stored/preset correction value from the RAM which is used to correct the output. Regarding the response's emphasis on "arbitrary value" this phrase is seen to mean whatever value comes out. Indeed pages 15 and 16 in applicant's specification refer to the preset or calculated correction value stored for each converter output. Lim's ADC outputs also select a correction value that is preset or calculated for each converter output.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
